**IMPORTANT NOTES**

- Special lengths, shapes, colours and textures are available on request.
- The individual formparts.fab panels must always be connected by means of brackets. These can be provided and installed by Rieder or by the customer but may be required for transport.
- formparts.fab and formparts.mono must be fitted with substructures (possibly at the factory already for handling reasons, depending on their size). These can be provided by Rieder as a service or by the customer. Examples of substructures can be sent on request.
- The load transfer to the building by means of a substructure or brackets must be ensured and coordinated for each project.
- The position of the fixing points must always be clarified individually for each specific project.
- For formparts.fab, a project specific testing may be necessary.
- The width and length may be swapped on request.
- Due to the fragility of the product, when designing the shapes and sizes, careful handling must be taken into consideration.
- Tolerances according to EN 12467
