

fibreC 3.0

RIEDER

fibreC 3.0

CO₂ reduced concrete

The fibreC 3.0 glassfibre reinforced concrete material envelops a facade area of 400 m² of the new Rieder headquarters. The slate texture in the colour pine green is reminiscent of slate. 50 % of the cement in the concrete matrix was replaced with natural pozzolana. This results in a CO₂ reduction of 30 %. From early summer 2023 the products concrete skin, öko skin and formparts are available with the cement-reduced matrix 3.0 in selected colours. The entire product range will be converted to cement-free material by 2027.
